

LISTING OF CLAIMS

Claim 1 (currently amended) A mop head, comprising:

~~a top surface, a bottom surface and a side surface; and
the side surface having a sculpted cutout.~~

a body having a top surface, a bottom surface, a front side surface, a rear side surface, a left side surface and a right side surface;

the top surface adjoining the left side surface at an edge, the edge adjoining the top surface and left side surface extending from the front surface to the rear surface of the body;

the top surface adjoining the right side surface at an edge, the edge adjoining the top surface and right side surface extending from the front surface to the rear surface of the body;

an indentation in at least one of the left or right side surfaces and in the bottom surface such that the bottom surface adjoins the indentation at an edge and the side surface having the indentation adjoins the indentation at an edge;

the indentation extending from the front surface to the rear surface of the body and having uniform cross sectional dimensions throughout its extent from the front surface to the rear surface of the body.

Claim 2 (currently amended) The mop head of claim 1 wherein the surface of the sculpted cutout is an indentation ~~corresponds~~ corresponding to the shape of molding.

Claim 3 (currently amended) The mop head of claim 2 wherein the surface of ~~shape of~~ the indentation corresponds to the shape of quarter round molding.

Claim 4 (original) The mop head of claim 1, further comprising:
a support member attached to the top surface.

Claim 5 (currently amended) The mop head of claim 4, wherein the support member has a left and right side surfaces corresponding to the left and right side surface of the mop head and the left and right side surfaces of the mop head extends beyond the left and right side surfaces of the support member.

Claims 6-10 (canceled).

Claim 11 (currently amended) A mop, comprising:
~~a mop head having a top surface, a bottom surface and a side surface, the side surface having a sculpted cutout, the side surface joining the top surface at an edge, the side surface joining the sculpted cutout at an end, and the sculpted cutout joining the bottom surface at an edge;~~
a mop head having a body, the body having a top surface, a bottom surface, a front side surface, a rear side surface, a left side surface and a right side surface; the top surface adjoining the left side surface at an edge, the edge adjoining the top surface and left side surface extending from the front surface to the rear surface of the body; the top surface adjoining the right side surface at an edge, the edge adjoining the top surface and right side surface extending

from the front surface to the rear surface of the body; an indentation in at least one of the left or right side surfaces and in the adjacent bottom surface such that the bottom surface adjoins the indentation at an edge and the side surface having the indentation adjoins the indentation at an edge; the indentation extending from the front surface to the rear surface of the body and having uniform cross sectional dimensions throughout its extent from the front surface to the rear surface of the body;

a support member attached to the top surface of the mop head; and

a mop handle attached to the support member.

Claim 12. (currently amended) The mop ~~head~~ of claim 11 wherein the surface of the indentation in the mop head sculpted cutout is an indentation corresponding in corresponds to the shape of molding.

Claim 13 (currently amended) The mop ~~head~~ of claim 12 wherein the surface shape of the indentation in the mop head corresponds the shape of quarter round molding.

Claim 14 (currently amended) The mop ~~head~~ of claim 11, wherein the support member has a left side surface and a right side surface corresponding to the left and right side surfaces of the mop head and the left and right side surfaces of the mop head extend ~~extends~~ beyond the left and right side surfaces of the support member.

Claim 15 (currently amended) A method of mopping comprising

using a mop with a mop head having ~~a top surface, a bottom surface and a side surface,~~
~~the side surface having a sculpted cutout, the side surface joining the top surface at an edge, the~~
~~side surface joining the sculpted cutout at an end, and the sculpted cutout joining the bottom~~
~~surface at an edge to clean a floor and a molding together.~~

a body, the body having a top surface, a bottom surface, a front side surface, a rear side surface, a
left side surface and a right side surface; the top surface adjoining the left side surface at an edge,
the edge adjoining the top surface and left side surface extending from the front surface to the
rear surface of the body; the top surface adjoining the right side surface at an edge, the edge
adjoining the top surface and right side surface extending from the front surface to the rear
surface of the body; an indentation in at least one of the left or right side surfaces and in the
bottom surface such that the bottom surface adjoins the indentation at an edge and the side
surface having the indention adjoins the indentation at an edge; the indentation extending from
the front surface to the rear surface of the body and having uniform cross sectional dimensions
throughout its extent from the front surface to the rear surface of the body;

to clean a floor and molding together.

Claim 16 (original) The method of mopping of claim 15 wherein the floor and
molding are cleaned at the same time.

Claim 17 (currently amended) A mop head comprising:

~~a top surface, a bottom surface, a first side surface and a second side surface;~~

~~the first side surface having a sculpted cutout; and~~

~~the second side surface having a sculpted cutout.~~

a body having a top surface, a bottom surface, a front side surface, a rear side surface, a left side surface and a right side surface;

the top surface adjoining the left side surface at an edge, the edge adjoining the top surface and left side surface extending from the front surface to the rear surface of the body;

the top surface adjoining the right side surface at an edge, the edge adjoining the top surface and right side surface extending from the front surface to the rear surface of the body;

indentations in the left and right side surfaces and in the bottom surface such that the bottom surface adjoins the indentations at an edge and the left and right side surfaces adjoin the indentation at edges;

the indentations extending from the front surface to the rear surface of the body and having uniform cross sectional dimensions throughout their extent from the front surface to the rear surface of the body.

Claim 18 (currently amended) The mop head of claim 17 wherein the ~~sculpted cutouts~~ are surface of the indentations correspond ~~corresponding~~ to the shape of molding.

Claim 19 (currently amended) The mop head of claim 18 wherein the ~~shape~~ surface of the indentations correspond to the shape of quarter round molding.
